

ANGEL GUARD

Angel Guard protects fresh silver from discoloration and oxidation with an invisible protective coating without using lacquer or other backing paint.

PROCEDURE FOR FLAT GLASS

1. Rinse the fresh silver well with distilled water.
2. Shake the bottle of Angel Guard well to mix the contents.
3. Pour into a clean trigger spray bottle and spray the silver well.
4. Allow it to sit on the silver for 5 to 10 minutes.
5. Rinse very thoroughly with sprayed distilled water. The Angel Guard is not soluble in water and can be difficult to rinse off.
6. When the piece is completely rinsed, allow it to air dry or dry it with clean, oil-free forced air.
7. Do not allow any water to dry in puddles.

PROCEDURE FOR BLOWN GLASS

1. Rinse the fresh silver well with distilled water.
2. Shake the bottle of Angel Guard well to mix the contents.
3. Pour enough Angel Guard into the container to coat the entire surface.
4. Roll the container around to get an even coating.
5. Allow the Angel Guard to sit on the silver for 5 to 10 minutes.
6. Tip out all of the remaining Angel Guard.
7. Pour in distilled water and shake the container to rinse it.
8. Repeat the rinsing process 2 more times.
9. Set the piece with the opening down so it can drain and dry.

SAFETY PRECAUTIONS

Contains tetrachloroethylene, which is toxic. Use in a well ventilated area. Use a respirator. Avoid contact with skin and eyes. Wear gloves and goggles. Keep out of reach of children.
